

# Environmental Protection Policy

## Purpose

In December 2024, Delton Technology released the “Environmental Protection Policy” for the first time, aiming to ensure that our business activities are in sync with global sustainable development goals through responsible innovation and operation, conservation of natural resources, reduction of pollution, and active response to climate change. All of Delton Technology’s business activities follow the environmental policy of “business activities comply with government environmental protection laws and regulations”, “continuous implementation of resource conservation, recycling and waste reduction”, “effective implementation of environmental management system” and “cooperation with third parties to achieve environmental protection goals”.

## Scope of application

This policy applies to all directors, officers and employees of DELTON TECHNOLOGY (GUANGZHOU) INC. and its subsidiaries, as well as business partners.

## Our Principles & Positions

### (1) Environmental compliance

Delton Technology complies with the laws, regulations and standards related to environmental protection in the place where it operates, obtains, maintains and updates all environmental permits, approval documents and registration certificates required by laws and regulations in accordance with the law, and updates them in a timely manner, as well as complies with the operation and reporting requirements of the permits.

### (2) Pollution control and biodiversity conservation

Delton Technology is committed to identifying and controlling hazardous chemicals and other substances released into the environment to ensure that these substances are safely handled, transported, stored, recycled or reused and disposed of.

Delton Technology’s factories do not operate near key biodiversity areas and ecological reserves, and ensure that the wastewater, waste gas and solid waste generated in the process of production and

operation are discharged and safely disposed of, reduce the discharge of harmful substances into the air, soil and water, and reduce the impact of operations on biodiversity and ecosystem services.

### **(3) climate action**

Delton Technology firmly supports relevant international conventions and national targets such as the China Carbon Neutrality Goal and the Paris Agreement, and continues to track, record and report energy consumption and greenhouse gas emissions.

Delton Technology supports taking preventive measures against environmental challenges, actively assumes greater environmental responsibility, encourages the development and promotion of environmentally friendly technologies, and continues to explore opportunities for energy conservation and carbon reduction. Through refined energy management, the construction of photovoltaic power stations, the replacement of high-efficiency, energy-saving and environmental protection equipment, the improvement of technology, the upgrading of digital systems for process control and energy saving, waste heat recovery and utilization and other projects to achieve energy conservation and carbon reduction.

Delton Technology actively promotes carbon emission reduction in the whole value chain. Organize online or offline carbon reduction training for suppliers, investigate and promote suppliers' net-zero commitments.

### **(4) Circular economy**

Delton Technology advocates the concept of circular economy, reduces the negative impact on the environment caused by excessive use of natural resources, and actively explores circular economy models such as the use of renewable raw materials, waste reuse, and water conservation and recycling.

### **(5) Hazardous Substances and Green Products**

Delton Technology aims to ensure that all products comply with environmental directives such as RoHS, REACH, WEEE, Green Packaging, as well as all applicable environmental regulations and customer requirements in target markets and regions. In the design phase, we prioritize the use of renewable, recyclable, and low-environmental-impact materials and strive to reduce energy and resource consumption throughout the product lifecycle.

Delton Technology is committed to integrating the QC080000 Hazardous Substance Process Management System into every aspect of our operations. Our manufacturing processes strictly adhere to lead-free production and low-toxicity controls. We actively collaborate with industry associations and professional institutions to identify and evaluate feasible alternatives to hazardous substances, continuously working to reduce, replace, and prevent the use of such substances to safeguard customer health and safety while minimizing environmental pollution. Environmental performance is a key criterion in the selection, evaluation, and assessment of our suppliers.

Delton Technology provides regular, targeted training to enhance environmental awareness and hazardous substance management capabilities across all employee levels, ensuring that staff possess the necessary knowledge and skills to fulfill their environmental responsibilities.

#### **(6) Information disclosure and environmental advocacy**

Delton Technology will regularly review the implementation of this policy and disclose relevant information in the annual ESG report.

Delton Technology is committed to enhancing the environmental protection capabilities of the company and its partners and promoting sustainable development and environmental protection through the introduction and sharing of pollution control and energy conservation and emission reduction technologies.

#### **Policy Issuance and Review**

This policy has been reviewed and approved by the General Manager of Delton Technology Group, and its implementation will be subject to ongoing supervision. Following the issuance of these guidelines, the ESG Office will conduct periodic reviews and revisions based on changes in the external environment, laws and regulations, and other relevant factors. Any amendments shall be released after review and approval by the Group General Manager.
